Summary

Android Developer with 4 years of experience specializing in Kotlin, XML, and Jetpack Compose. Proven expertise in building robust B2B Android applications, with a strong focus on modular architecture, background services, Gradle customization, and Play Store-style app distribution. Skilled in integrating AWS services, managing Room database migrations, and optimizing UI/UX with modern Android libraries.

Skills

- **Programming Languages & Frameworks:** Kotlin, Jetpack Compose, Kotlin Multiplatform (KMP)
- **Architectural Patterns:** MVVM, MVI, Clean Architecture, ViewModel, LiveData, Flow
- **UI Development:** Jetpack Compose, XML
- **Database Management:** Room, SQLite, PostgreSQL
- **Networking & APIs:** Retrofit, OkHttp3, Ktor
- **Dependency Injection:** Hilt, Dagger2, Koin
- **Background Processing:** WorkManager, Background Services
- **Cloud & Storage:** AWS S3, Firebase
- **Tools:** Android Studio, VS Code, DBeaver, DB Browser, Postman, Notion
- **Testing & Optimization:** JUnit, Performance Tuning, Memory Leak Fixes
- **Version Control & Collaboration:** Git, GitHub, CI/CD GitHub actions
- **App Deployment:** Google Play Store Publishing & Updates, Jenkins
- **Libraries:** SimplyPDF, ThreeTenBP, Paging3, Epoxy, Sentry

Work Experience

Android Developer

Logic Soft Pvt Ltd. | Chennai, India

August 2021 – Present

Key Responsibilities:

- Participate in requirement analysis, sprint planning, and the development process. Write clean, maintainable, and testable code following industry standards.
- Collaborate with cross-functional teams including product managers and designers to define and deliver high-quality features. Integrated and maintained 10+ backend APIs using Retrofit and Ktor, enhancing app stability and responsiveness.
- Conduct code reviews and provide constructive feedback to team members to ensure code quality and adherence to design patterns.
- Continuously research, evaluate, and apply new technologies, tools, and practices to improve development efficiency.

- Publish and maintain applications on the Google Play Store, including release management, analytics, and user support.
- Mentor and guide new Android developers, providing knowledge transfer and best practices for maintainable code.

Notable Achievements:

- Independently managed 4+ Android apps over a 3-month period, resolving production issues and shipping feature updates that improved user feedback.

UI Migrations and Performance Improvement:

- Migrated XML-based UI to Jetpack Compose, eliminating third-party UI libraries, simplifying complex UI implementations, and improving app performance.

Offline POS Application Development:

- Developed a fully offline-capable POS application ensuring uninterrupted operations by synchronizing with the server when a network connection is available.
- Integrated camera-based barcode scanning powered by a custom scanning library developed using ML Kit.
- Built a custom printing library using EPSON commands to enable invoice printing directly from the app.
- Resolved memory crashes during large-scale data synchronization by implementing a packet-based JSON processing strategy.
- Utilized WorkManager to schedule background sync tasks, reducing synchronization time from 10 minutes to 3 minutes.

Dashboard Application and Portfolio with KMP:

- Created a dashboard app targeting Android and Desktop using Kotlin Multiplatform (KMP), including Ktor for API integration. Reduced development time by 30% and code duplication by 40% using KMP.
- Developed a personal portfolio using Kotlin Multiplatform.

Internal App Store with Jetpack Compose:

- Developed an internal App Store using AWS S3, streamlining app distribution and eliminating Play Store dependencies for internal apps. Reduced app publication time by 50% by avoiding Play Store review delays.

CI/CD Pipeline Implementation:

- Implemented CI/CD pipelines using Jenkins, automating build and deployment processes, reducing manual effort and APK generation time by 40%.

Gradle Task Automation:

- Created a customizable Gradle task for uploading APKs to the S3 bucket, eliminating manual effort.

Representative Tracking Application:

- Developed a representative tracking application using Google Maps API and Foreground Services. The app continuously captures latitude and longitude at specified distance intervals and transmits data to a server, along with additional business-specific logic and metadata.

Education

Bachelor of Engineering in Computer Science Engineering

Mahath Amma Institute of Engineering and Technology, Pudukkottai, Tamil Nadu (2017– 2021)

Higher Secondary Education, Biology & Mathematics Govt HSS,

Maramadakki, Tamil Nadu (2015–2017)
